

# gPhoneXs registered northern winter storm

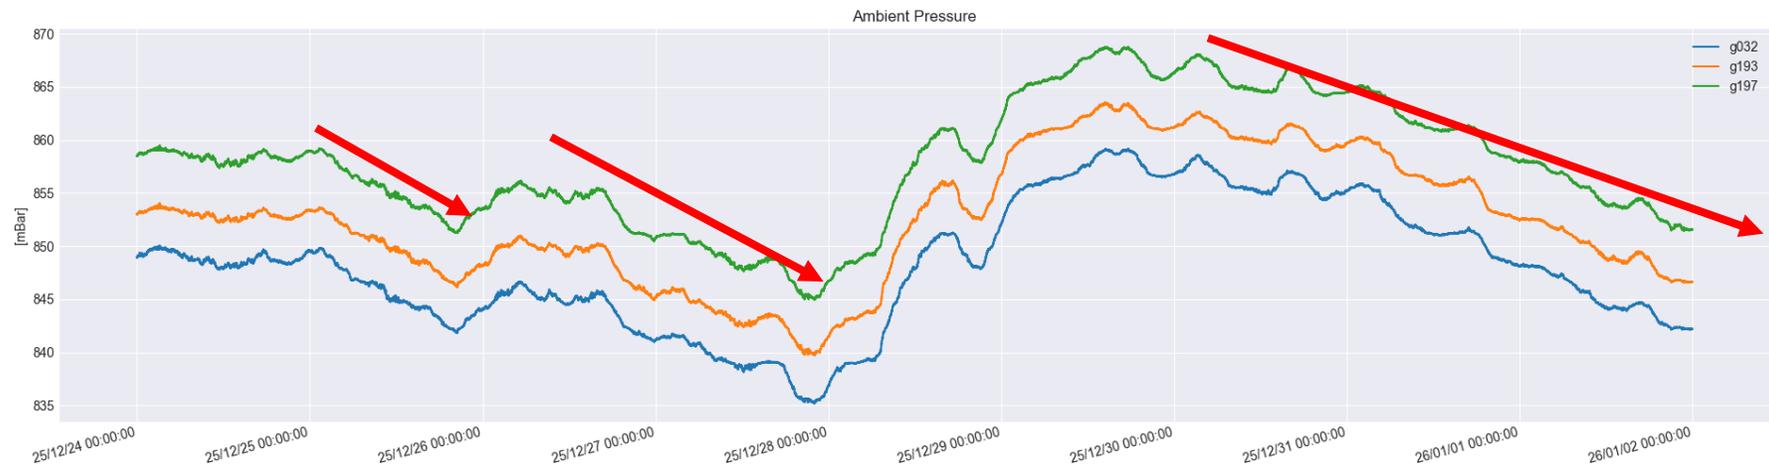

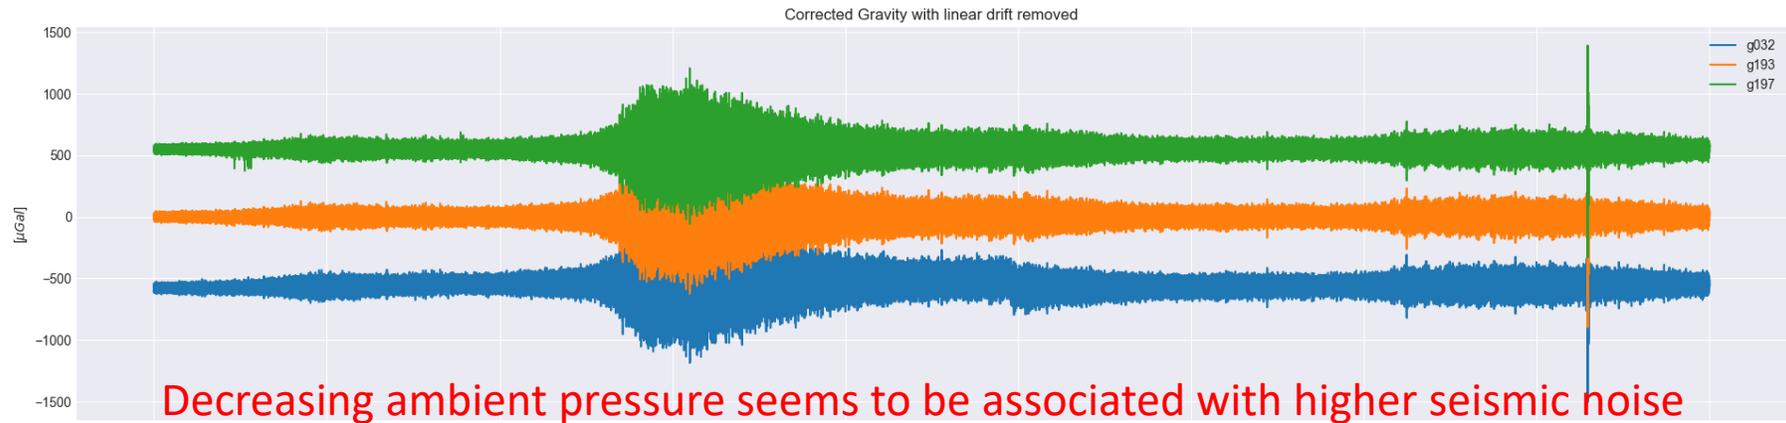

2026-01-23

# Summary

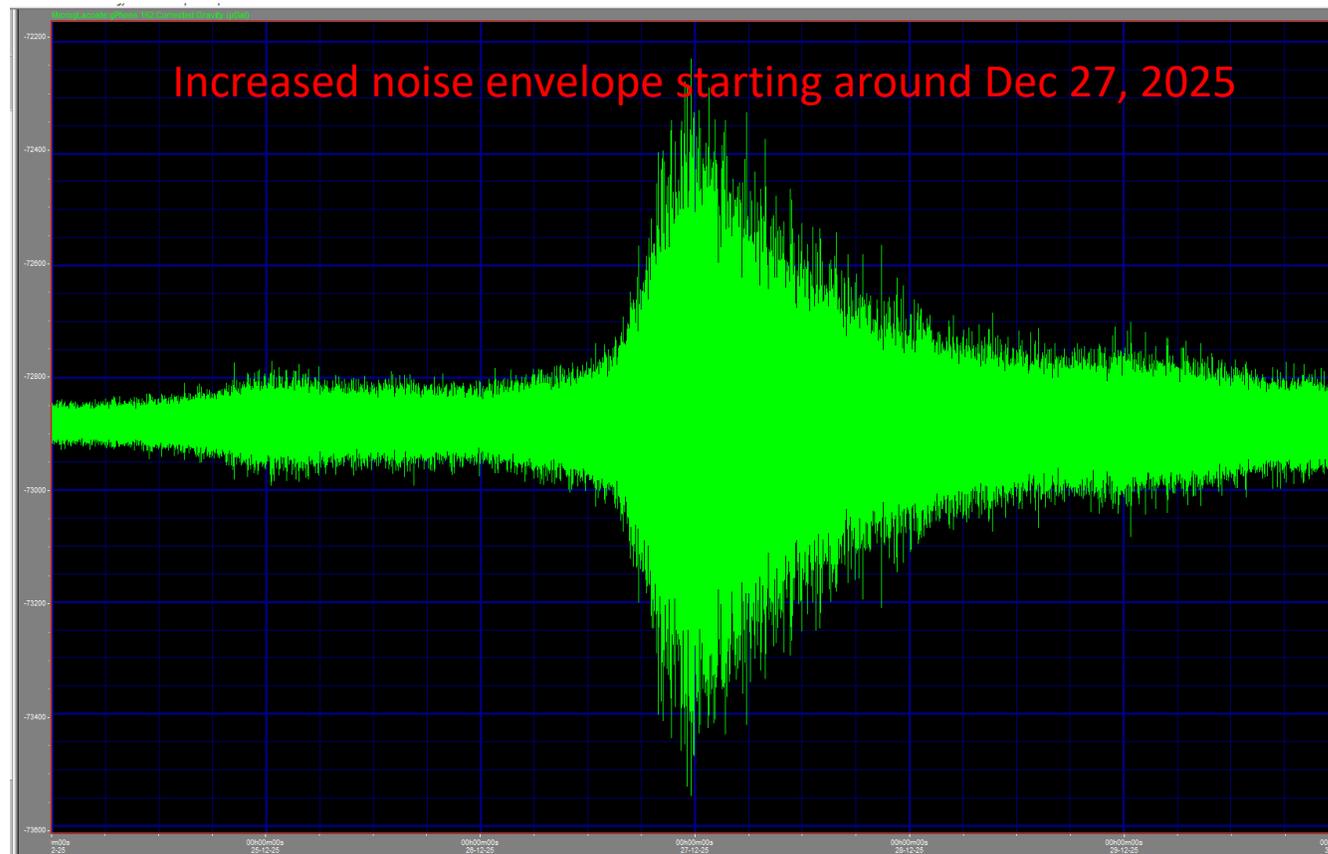

- gPhoneXs at MGL and TMGO recorded similar, increased noise envelopes during Dec 27 – 28, 2025;
- During that period, there was a big storm over the Great Lakes as well as a storm moving out into the North Atlantic (Derek van Westrum, NOAA) (<https://weather.substack.com/p/december-27-2025-saturday-evening>)
- It seems that the northern winter storm caused strong enough increased seismic noise that was picked up by multiple gPhones
- Similar phenomenon has been reported before by gPhone users in Europe

gPhoneXs at MGL registered increased noise starting around Dec 27, 2025, coinciding with the occurrence of the northern winter storm

# gPhoneX at TMGO registered similar noise increases as those at MGL

(data: Derek van Westrum)
